SOIL TRANSFORMATIONS

Name	Organization	Date
Address		
Email Address	Phone	

Contact us to schedule your assessment(s) before collecting samples to ensure we are ready to assess your sample(s) upon receipt. (Soil samples taken in spring and liquid samples should be shipped to arrive the same day or overnight to ensure most accurate results.) Instructions for collecting samples can be found at www.soiltransformations.com/services.

Sample Name (e.g. Weedy Patch 1, Field D "before")	Plants Present (if applicable)	Plants Desired	Total Cost*
1.			\$120
2.			\$210
3.			\$300

For each sample, you will receive a report with an estimate of the quantities of beneficial and/or detrimental bacteria, protozoa, nematodes, and fungi. The results for each category will be shown in a table as an approximation of organisms per gram of soil, along with recommended ranges for the type of plants you want to grow. The assessment also includes a few video and/or still images of microbial life in your sample based on what we find in your sample.

* **Total Cost:** Includes the report, microscope images of microbes that are observed, and a 20-minute follow up call to discuss the results. Payment is due via Paypal, Venmo, or credit card when the assessment(s) are completed. Turnaround time is 5 days. If you have 4 or more assessments at a time and/or would like to have ongoing assessments performed, please contact us to arrange a package plan. Please contact us if you have any questions. We are here to help you create healthier soil to grow healthier plants!
